

## NON-INSURED HEALTH BENEFITS PROGRAM: CHANGE IN COVERAGE OF HIGHER STRENGTH LONG-ACTING OPIOIDS IN ONTARIO REGION

In January 2017, the Non-Insured Health Benefits (NIHB) Program will no longer cover higher strength long-acting (LA) opioid products for non-palliative clients in Ontario. This change will promote safer use of opioids and aligns with the upcoming Ontario Drug Benefit Formulary Update affecting the following opioids:

- long-acting morphine 200mg tablets/capsules
- long-acting hydromorphone 24mg and 30mg capsules
- fentanyl 75mcg/hr and 100mcg/hr patches

Please note that clients who previously received approval on a case-by-case basis for prescriptions of OxyNeo 60mg and 80mg tablets will no longer be able to have these strengths covered by the Program as of January 2017. Exceptions may be made for palliative clients.

The table below lists the drugs that will no longer be covered\* by NIHB in Ontario in January 2017:

DRUG NAME	DIN	MANUFACTURER
MS Contin 200 mg SR Tab	02014327	Purdue Pharma

Sandoz Fentanyl transdermal patch 100 mcg	02327163	Sandoz Canada Inc.
Teva-Fentanyl transdermal patch 100 mcg	02282984	Teva Canada Ltd.

\*Palliative clients will continue to be able to access higher strength drugs when necessary.

Pharmacy providers should ensure that clients taking these products get their prescriptions adjusted and obtain prior approval as necessary for new strengths accordingly prior to the implementation date.

For clarification or questions regarding this change, please call the Drug Exception Centre at 1-800-580-0950.
